1. Agregar JavaFx a netbeans de la carpeta de github

2. Damos a nueva libreria

3. Agregamos el nombre a la libreria

4. Agregamos el JAR

5. Entramos a la carpeta javafx y a lib y seleccionamos todas los JAR

6. Librerias de mongoDB, Seleccionamos el proyecto en librerias, y le damos en agregar JAR

7. Seleccionamos todos los jar necesarios que son 3

8. Configuración de JavaFx, vamos a las propiedades del proyecto

9. Damos en el mas, en libraries

10. Agregar libreria

11. Seleccionamos java fx y agregar

12. Lo mismo en run

13. Ahora a nuestro proyecto le damos en Clean and build primero, y después ejecutamos

FIN
